```
']") #write the jp2 file with open('CSV JPG'.format(i), 'wb') as f: for k, d in list(e.keys()): f.write(str(d)+",") f.write(str(e[k]))
f.write(' ') f.close() #JPG image #fill the webpage #attach an onclick event to the txt A: The solution was so easy. I didn't have
to write the code with a loop and write the jpg each time, instead I just used matplotlib.pyplot as recommended by chrisb. Also I
made a time array and used it to call the jpg individually. The code is very easy: for k in range(n): p = fig.gca()
plt.imshow(mymatrix[k], interpolation="nearest", origin="lower", cmap=cmap_mpl) #save as jpg 82157476af
```
