The story of Nero never stops and it definitely never sleeps as this particular software remains one of the best solutions when it comes to burning discs. Version 8 (which came out in 2007 and is the current version available as of this writing) is arguably more than a powerful burning tool. Upon starting the software, users will be greeted with several welcome features. The main window, which is the main point of contact with the user, features a very self-explanatory workspace with several pre-designed discs at the

same time. The custom media (CD/DVD, Blu-ray, and DVD-R/RW) can be selected using an intuitive toolbar or using the entries inside the left panel where a details panel is always available. To those familiar with the tools of former Nero versions, one of the most significant upgrades in Nero 8 comes in the form of a new Transfers pane where users can either find their disc images or Transfers from another disc. The rest of the interface features very self-explanatory toolbars for navigating the main window and the left panel. On the right, an additional workspace area is designed for those who intend to

create several discs at the same time with the usage of a single project, however, it's only accessible once the user has filled the main window. To keep Nero 7 Premium's track record of burning discs alive, Nero 8 offers a similar tool for burning MP3 CDs and DVDs with data-based tracks. The tracks feature a song title and the artist alongside the album, and the track management of the application does a very good job in keeping the lists organized, however, it needs to be mentioned that the tool lacks the ability to name albums and artists to discs. Underneath the activity pane is a very similar burning workspace

where all of the disc options are accessible. Besides the default Blue-ray options (Audio and Video), the disc types feature a separate area in order to explore. There are even options for support of dual-layer discs. Underneath the tabbed-window, options are readily available to select the region code, audio track, and types of discs. The disc's default properties are accessible via the disc's properties window, and a large selection of options are available for choosing a particular disc type and setting the options available. It's vital to know that Nero 7 Premium doesn't support any discs larger than 4.7GB, therefore, the users of this

application may face problems when dealing with large downloads (as well as data-

While the new version of Nero, the Nero 2016, is clearly geared towards gamers, user-friendly and all-around general computer users will definitely see their added value with Nero 7 Premium. It was, of course, a great pleasure to see Nero one-up its competitors and accomplish what only Windows Media and AviDemo could do. For the one who has read my previous posts, you'll know that I'm a big fan of Nero, especially when it comes to the Nero Burning ROM and the Nero Express... and this is exactly why Nero 7 Premium was

such a big hit when it was released. - You have a full stand-alone CD/DVD burning toolset - A Design Wizard - Create unlimited CD/DVD projects - Make complete customization of your project - Enhanced audio toolset - Better burning... Benchmark test: 1. Nero 7 Premium burning speed Over the last 6 years, the CD/DVD industry has been struggling. The CD/DVD drive is gradually losing its market and trade, so why would anyone want to use old-fashioned CD/DVD burning software when you can get a software suite with USB drives which cost one-third of what the same software costs to buy? Or how about a 3D laser that could change the way you analyze geology in your backyard? Just looking for a inexpensive, durable way to protect your home against unwanted intruders? You are not

alone. Having just recently watched “The American President” (Benedict), I am amazed at how dangerously close to the truth he portrayed the story of JFK. My family and I have been discussing the fact that there is always one bull-headed president. And JFK was that president, so much so that he is the most probably person to ever occupy the Oval Office. NASA is one of the most famous names of America. This is the space agency which put the words “Space” and “Exploration” in the US vocabulary. On April 25
